

NEON KACTUS

Wholesale Guide 2022

Neil Tombs and Charlotte Gornall founded Neon Kactus in 2018. With over 20 years working in the food and drink industry and experiencing first-hand the environmental impact of single use plastic, they knew they had to create a positive change.

Combining two of their great passions; their love for the planet and great tasting coffee, they embarked on this journey. After trialling several reusable coffee cups they realised the solution was to design and make their own, to create a cup that mirrored the coffee shop experience with no compromise on taste.

They knew it would be important to create a reusable cup that encapsulated, style, design and performance in order to encourage others to ditch the disposable.

The result was the Neon Kactus glass coffee cup. A modern and stylish product designed to mirror the convenience and drinking pleasure of the coffee shop and eradicate the need for single use cups.

Our mission is simple...

Create a better
Tomorrow!

We aim to do this by creating reusable products for an on the go lifestyle with unrivalled style and performance that will decrease the need for plastic production.

Today Neon Kactus products are used by thousands of people in over 30 countries around the world diverting millions of disposable products from landfill every year.

In the pursuit of our mission we aim to continue to inspire others to Create A Better Tomorrow by developing more products that will accelerate the everyday use of reusables.

Climate Neutral

If companies take responsibility for their products and carbon footprint the planet will be in a much better place. This is why Neon Kactus have partnered with non-profit Offset Earth to fully offset our carbon footprint and support a Climate Positive Workforce.

One Tree Planted

Trees purify our air, create habitats for biodiversity and enrich our wellbeing by neutralising the carbon in our atmosphere. For every Neon Kactus reusable purchased on our website we plant a tree to help reforest our planet and Create A Better Tomorrow!

Products

Specification & Pricing

GLASS

We have chosen to use a high boron (12%), hand blown glass because it is made from naturally abundant materials and is 100% plastic free

Neon Kactus reusables are made using only premium quality and sustainably sourced materials.

STAINLESS STEEL

We use premium grade 18/8 stainless steel, known for its antibacterial and hygienic properties which means it does not need an interior coating and is easy to clean with no metallic after taste.

COMPOSTABLE BIO-PLASTICS

Our compostable bioplastics are made from low carbon, fully renewable plant based materials. Our unique material blend is free from harmful chemicals including lead/ cadmium, BPA, phthalates and melamine.
